Section 1 — Application Overview: What DataTalk AI is, what problem it solves, the full tech stack table (Streamlit, Plotly, Databricks, Groq LLaMA 3, LangChain), and a complete column-by-column data schema breakdown.

Section 2 — Architecture & Structure: How the app starts, all 6 environment variables explained, and a 10-step end-to-end flow from data load to insight rendering.

Section 3 — KPI Flip Cards: All 6 KPIs explained, how the 3D flip mechanic works, and exactly how the delta calculation logic compares current vs baseline values.

Section 4 — Tab 1 (AI Assistant): Default view charts, the query engine panel, the fast path vs LLM routing table, the full 8-step AI pipeline, and how comparison queries work.

Section 5 — LLM Engine: The system prompt's role, anomaly auto-detection list, the full LLMResponse schema table, the InsightSection fields, and AnomalyDetail structure.

Section 6 — Tab 2 (Deep Dive): All 12 charts explained across 4 sections (Financial, Denial Intelligence, Operational Risk, Network Mix) — what each chart type shows and why.

Section 7 — Tab 3 (Risk & Findings): All 6 risk KPI cards with their green/red thresholds, provider risk table, radar chart, and how the 6 automated alerts self-generate with real numbers.

Section 8 — Tab 4 (Data Explorer): Export configuration, column selection, and the live data preview grid.

Sections 9–12: Session state variables, caching logic, filter propagation mechanics, the full UI color system, CSS animations explained, and a management summary table mapping each role (Manager, Finance, Compliance, Executive) to how they'd use the app.
